DETAILED ACTION

This action is in response to the applicant election of process claims 1-9, 12, 13, filed on 7/7/2004. It is require the applicant to cancel non-elected claims 9-10.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 5-6 are rejected under 35 U.S.C. 102(b) as being anticipated by IBM Technical Disclosure Bulletin (TDB-ACC-NO: NN75101486, VOL 18, Issue 5)

IBM publication teaches growing sapphire on silicon, wherein silicon layer has cavities (Fig. 2B); growing sapphire in the cavities of silicon substrate (see Fig. 2C); separating the grown sapphire from the silicon substrate by contacting with copper plate or by evaporation (see fig. 2D and see the abstract).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over IBMTDB in combination with Fujitsu LTD(JP53016396A).

Fujitsu publication teaches a method of growing sapphire on silicon substrate at a temperature of 600 °C; heat treating the grown sapphire at a temperature 1270 °C to form alpha sapphire (alumina) layer.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over IBMTDB publication in combination with Kawama et al (US 5,665,607).

IBMTDB publication does not teach etching the sapphire substrate. Kawama teaches etching silicon "3" to separated from sapphire "1" using HF (see fig. 13 b col.23, left col, lines 27-40). It would have been obvious to use etching in the invention of IBM publication to remove silicon material from sapphire by etching as suggested by Kawama et al.

Claims 7-8, 12-13 is allowed.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: Prior art neither teach nor suggest growing semiconductor layer on the sapphire substrate grown on a seed substrate and removing seed substrate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
